

Product Study: Three Producthunt Products

I chose three products that make everyday tasks easier in different ways. **Notion** helps people organize work and take notes, **Soula Care** offers support information during pregnancy and early parenthood, and **Emma Intelligence** helps people understand food labels and nutrition. Here is what each product does and one idea I would borrow from it.

Notion

1. Product name and link

Notion (<https://www.producthunt.com/products/notion>)

2. Who is it for and why do people like it?

It is for students, individuals, and teams who want to keep their notes and plans together. People like that they can make a simple page for class notes or build a whole system for projects in the same app.

3. What problem does it solve?

Notes, tasks, files, and project updates often end up in different places. Notion gives them a shared home, so it is easier to find information and see what needs to be done.

4. How does it work?

You create pages and add text, checklists, images, or tables. You can link pages together, view tasks in different ways, and share a workspace with other people.

5. What capabilities or AI does it use?

Its main tools are flexible pages, databases, templates, and collaboration. Notion AI can help draft or summarize writing and answer questions using information in a workspace.

6. Is it easy to use?

Yes, it is really simple and easy to use at the start. Starting with a blank page or a template is fairly easy. Learning all the database options can take more time, so I would begin with one small project.

7. One detail I would borrow

The idea of starting simple and adding more structure only when I need it. A notes page that can later become a project tracker feels useful without forcing everyone to plan the same way. Also, the flow of taking notes is really smooth and easy to use, make users not bother with complex tools or features that they don't really need.

Soula Care

1. Product name and link

Soula Care (<https://www.producthunt.com/products/soula-care>)

2. Who is it for and why do people like it?

It was introduced for moms or parents who are going through pregnancy, birth, and the first months of parenthood. People like having a place to ask questions and find reassuring information when they feel unsure or alone.

3. What problem does it solve?

New parents can face many questions and mixed advice, often at times when a professional is not available. Soula tries to make basic information and emotional support easier to reach at any hour.

4. How does it work?

The app offers a chat assistant for questions, a pregnancy tracker, and articles or videos from birth and parenting specialists. A user can check information or talk through a worry from their phone.

5. What capabilities or AI does it use?

It uses an AI chat assistant to respond to questions in everyday language. The makers say its answers are shaped by reviewed pregnancy and postpartum

knowledge. Its educational library and pregnancy tracking are useful features even without the chat.

6. Is it easy to use?

The basic idea and flow features are easy to understand, just need to open the app, ask a question, or choose something to read. The UI is also calming and not overwhelming, where the questions themselves already make parents anxious.

7. One detail I would borrow

Its gentle check-in flow for users to use the app. Asking someone how they feel before giving information makes the experience feel more personal and helps the app respond to what matters at that moment.

Emma Intelligence (Sugar Free Food Scanner)

1. Product name and link

Emma Intelligence (<https://www.producthunt.com/products/sugar-free-food-scanner>)

2. Who is it for and why do people like it?

It is for shoppers who want to notice added sugar and understand what is in packaged food. People like getting a quick, readable answer instead of trying to decode a long ingredients list in the shop.

3. What problem does it solve?

Sugar can appear under unfamiliar names of synthetic ingredients, and labels can be hard to read quickly. The scanner helps people spot ingredients they may want to look into before choosing a product.

4. How does it work?

A user scans a barcode or takes a photo of a food label. The app reads the ingredients and shows a breakdown, a score, and simple guidance about the product.

5. What capabilities or AI does it use?

It can read labels in different languages and identify hidden sugar names, additives, and allergens. The makers say AI helps it interpret and explain the ingredient list in plain language.

6. Is it easy to use?

Scanning a barcode or label sounds simple, and reviewers praise the clear results. Some also report missing products or difficulty with photo scans, so the answer may not be complete every time.

7. One detail I would borrow

The short explanation after the scan. Showing what the app found and why it matters is more helpful than giving a score with no reason behind it. So user can know the reason and get knowledge about it.

My Product Idea:

NouriCircle (Nourishing children while connecting parents in one circle)

<https://github.com/fredericsetievi/AIID-NouriCircle>

I want to build NouriCircle, a website app for new parents and caregivers of babies starting solid foods and young children. Many parents want to know what is in packaged and fresh foods, how much to serve, and whether their child's meals provide a good mix of nutrients. With NouriCircle, they could take an image of the food or scan a food label or look up a fresh food such as salmon, enter the portion eaten, and see an estimate based on their child's age and the rest of the day's meals. An AI assistant would answer questions about food and nutrition in plain language, including questions about specific ingredients and additives, while taking saved allergies into account. The app would also have a moderated forum where parents can talk with other parents about feeding, development, health, and their own worries.

1. Target user

New parents and caregivers of babies starting solid foods and young children.

2. Problem

Parents struggle to understand food labels, nutrients in fresh foods, suitable portions, and whether specific additives are a concern for children. They also feel unsure where to ask questions about their child's health and development or share their own worries.

3. Product type

A website app with a food label scanner, fresh food nutrition guide, meal log, AI assistant, and moderated forum for parents.

4. Core value

Parents can better understand what their child eats, see how meals contribute to daily nutrition, ask food questions, and connect with other parents.

5. Features

- **Getting started guide:** A short guide shows parents how to use the main parts of the app. It helps new users get started without feeling lost.
- **Child profile:** Parents can save their child's nickname, age, and confirmed allergies. This keeps useful information nearby when they explore foods or check labels.
- **Food explorer:** Parents can search a list of common foods and read simple preparation tips. This helps them find food ideas and think about how to serve them.
- **Portion estimate:** Parents can enter an amount of food in grams to see an approximate protein value. This makes nutrition numbers easier to understand, but it does not tell them whether their child has eaten enough.
- **My foods:** Parents can add foods that are not in the app's list and save their own notes. This makes the app more useful for the foods their family actually eats.
- **Daily meal log:** Parents can record foods offered during the day and see a simple summary. This helps them remember what their child has tried without keeping a separate notebook.
- **Barcode lookup:** Parents can type the barcode on a packaged food to see product information from Open Food Facts. This helps them find ingredients and allergen details, although they should always check the package itself.
- **Food label photo:** Parents can take or upload a photo of a food label. The app reads the text and points out words they may want to check, making small ingredient lists easier to review. Parents should correct any text the app reads incorrectly.
- **Ask Nouri:** Parents can ask questions about foods and feeding. The app currently offers prepared guidance; live AI answers are available only when its secure service is connected. The answers are a starting point, not medical advice.
- **Parent circle:** Parents can read sample discussions and write posts or replies on their own device. This gives them a space to organize thoughts and see common parenting questions. Posts are not shared with other families in the current prototype.

- **Phone-friendly design:** The app has simple navigation for phone screens, and the mobile version can open the camera to photograph a label. This makes it easier to use while shopping or preparing a meal.

6. One sentence

For new parents and caregivers, NouriCircle helps them understand their child's food and feel supported by combining nutrition tools, an AI assistant, and a moderated parent forum.

7. Implement from references

- **Notion:** I would use clear sections to organize feeding, child development, health, and parent wellbeing. Parents could also keep their child's food information and meal log in one place.
- **Soula Care:** I would use a friendly AI assistant that parents can ask about food and nutrition. Its answers should be easy to understand and considerate of how worried a new parent may feel.
- **Emma Intelligence (Sugar Free Food Scanner):** I would use barcode and food label scanning to explain nutrients, ingredients, and allergens in plain language. NouriCircle would make the explanation more useful for parents by considering their child's age and saved allergies.

NouriCircle | Food and parent support
NouriCircle | 儿童饮食与家长支持

Understand their food. Find your circle.

看懂孩子的饮食，找到懂你的圈子。

A web app for parents of babies starting solids and young children.
为开始添加辅食的宝宝和幼儿家长打造的网页应用。

Food label scan
扫描食品标签

Fresh food portions

Speak AI 口语私教 App

开会、谈判、见客户，英语张口就来

• • Speak 是什么？

Speak 是一款面向全球用户的 AI 英语口语 App，专为「听得懂，说不出」，帮你真正开口说英语。每节课都围绕真实场景设计，通过大量开口和反复练习，把英语表达练成本能。不断记录单词和语法——用得越多，进步越快。

扫描下方二维码，免费下载注册！

用 Speak，再忙也能坚持下去

24 小时在线学 5 分钟也能练 AI 智能无压力

Speak 适合谁？

- ① 忙碌族：碎片时间，碎片练习，碎片进步
- ② 实力派：帮助大量开口，真正练出口语能力
- ③ 实践派：喜欢真实场景，在不知不觉中养成学习习惯
- ④ 自由派：想按自己的节奏，随时随地都能学

视频课 · 跟真实场景学地道表达

由专业国际化教研团队打造的主题课程，真实场景，真实表达。

- 零：零基础，从最简单的日常用语开始，轻松入门。
- 练：跟真人外教实时互动，沉浸式练习，提高口语。
- 学：结合真实场景，学习地道表达，提升听力。

自由对话 · 想聊什么就聊什么

以 Speak 专家教研团队打造的主题场景为基础，尽情和 Speak AI 自由对话。

- 多样化主题
- 1 对 1 自由对话
- 主题角色切换

场景丰富：职场、生活、社交、商务、旅行、兴趣爱好等主题，自由选择。角色切换：与不同角色对话，提升应变能力。自由对话：在真实场景中练习，提升口语流利度。

Speak 私教 · 你的专属 AI 口语老师

你的专属 AI 英语老师，24 小时在线，陪你练习，纠错和提升。

教你开会的地道表达 当场生成专属小课 帮你纠正发音问题

学习激励 · 让你坚持下去

学英语，贵在坚持。排行榜、连续打卡和赠送课程，帮你把每天练习变成习惯。

「像母语人士一样说英语」挑战

Speak 口语私教 App，帮你开口说英语！

为什么用 Speak，开口更多，进步更快

大量开口，练得更多

Speak 把口语练习贯穿每节课，用户平均每周开口超过 1,000 句。

AI 实时反馈

不用等老师，也不用怕犯错。AI 随时提供反馈和纠正，让你在自然对话中越练越顺。

随时随地都能练

无界约课，通勤、在家、办公室都能练。5 分钟也能完成一次练习，还支持免提模式。

难度随你调整

从零基础到高阶进阶，Speak 根据你的水平和学习目标，匹配适合的练习内容。

越练越流利

连续打卡和目標管理，帮你把练习变成习惯。按平均练习量，一周可累计开口约 57,200 句。

效果看得见

用过 Speak 后，80% 的用户表示，开口说英语时不再紧张和抗拒。

数据与认可

一年可累计开口 57200 句

每天使用 Speak 20 分钟，一周平均开口约 1,000 句。

110 314 457 598 740 877 1110

Open AI ChatGPT 背后的 AI 公司

Speak 获 OpenAI Startup Fund 投资。

全球 1500 万+ 下载

Speak 用户遍布全球。

数百万人正在用 Speak 开口说英语

4.8 分 | 1500 万+ 下载

Speak User ★★★★★

2 个月就见效了。

只用了 2 个月，练习就大不一样，真是去掉了 App 了。我试过各种英语学习方法，虽然能听懂，但一直没办法真正开口说。

Speak User ★★★★★

超棒的英语会话 App。

我试过国内外各种英语学校和线上英语课程，但很多的时候得不到跟 App 提供的这种反馈、个性化的反馈和指导，真的帮了我大忙。

Speak User ★★★★★

练习实用的英语会话 App。

就像真实对话一样，能模拟真实生活场景，模拟各种生活场景，而且每个场景的地方都会提供一和正，让自然的英语表达慢慢内化成习惯。

Speak User ★★★★★

可以无限次反复练习。

能用不同的场景反复练习同一个句子，说点真的很棒，不用大声说出来练习，地道的表达就说不出口，可以不在乎别人眼光，无限次重复练习，真的非常实用。
